

A Future House in Coquitlam

📅 April 18, 2016 👤 CQ125 💬 No comments

A house in the year 2323 in Coquitlam will have robots that can help you. Robots will be trained to look after children if they are alone and to help them with their homework. The robots will bring plates to the dinner table. All you have to do is think about what you want to eat and the table will make the food for you. The houses of the future will be covered with glass domes. The domes will keep everyone inside warm and look fantastic. You will have to type a secret password into a computer to make the dome open and close.

There will be a variety of houses in Coquitlam in 2323, but each one will have a robot room, a playroom, a pet room, a room full of buttons with instructions, a swimming pool and a room used to grow your own fruits and vegetables. Your garage will also be inside your house. When you want to travel in your car, you just have to press a button to open the glass dome and then tell the car where you want to go; it will take you there. The cars will be

flying cars. You will not need airplanes anymore because your car will be able to take you long distances to faraway places like China.

Everyone in the world will admire the houses in Coquitlam that exist in the year 2323.
